MERCEDES-BENZ C 63 AMG

Akrapovič Evolution exhaust system for the Mercedes-Benz C 63 AMG (6.3 V8)
Akrapovič Slip-On exhaust system for the Mercedes-Benz C 63 AMG (6.3 V8)

The folks from AMG have unleashed yet another monster upon the public highways. Equipped with a massive 6.3-liter V8, this 457-horsepower, rear-wheel drive rocket does more than just quicken your pulse. An Akrapovič aftermarket exhaust only adds to the excitement.

Two variations of systems are available for the C 63 AMG. They are made entirely from our proprietary titanium* alloy. The first is our Slip-On muffler system. The Slip-On kit replaces the stock mufflers from the axle back. Stepping up to our Evolution system, we include the mufflers from the Slip-On kit and then add a lightweight link pipe assembly that incorporates integrated resonators. Both systems feature our unique exhaust tips. The bezels for these tips are cast in our foundry from an exclusive blend of titanium. They will give your vehicle a distinctive look, setting it apart from the rest of the crowd.

Akrapovič titanium exhausts are not just about appearances. Sound, weight, and performance are all part of the equation as well. The Slip-On system adds 5 horsepower while at the same time trimming overall weight by a substantial 9 kg compared to the stock exhaust. The Evolution system produces a 12-horsepower gain and reduces weight by an incredible 19 kg! Soundwise, both systems bring out the true character of the car. Deeper and more aggressive than stock, they retain the trademark personality of the 6.3-liter AMG engine. The Evolution system is notably louder than the Slip-On, but is still perfectly suitable for day-to-day driving.

Evolution system:

- 2 titanium link pipes, incl. resonators
- 2 titanium mufflers
- 4 titanium tail pipes

Hard facts:

- Plus 12 HP (at 3,550 rpm)
- Plus 22 Nm of torque (at 3,720 rpm)
- 19 kg lighter than stock

Slip-On system, homologated:

- 2 titanium mufflers
- 4 titanium tail pipes

Hard facts:

- Plus 5 HP (at 5,830 rpm)
- Plus 12 Nm of torque (at 1,900 rpm)
- 9 kg lighter than stock

*A note on titanium:

Not all titanium alloys are created equal. Akrapovič titanium exhaust systems are crafted from a proprietary titanium alloy. While our alloy is considerably more expensive and difficult to form than the more common "commercial" alloys, it ensures a product that is substantially more durable, dimensionally stable, and heat resistant. Unparalleled in quality, all Akrapovič products are designed without compromise to guarantee the utmost customer satisfaction.

When installing an aftermarket Akrapovič exhaust system with sports catalysets, which are developed for use on closed tracks, we recommend remapping the ECU in order to prevent potential "engine check light" warning signals.

The technical descriptions of Akrapovič exhaust systems and similar products are subject to changes without prior notification. Images and illustrations may differ. Subject to technical alterations. We are not responsible for the accuracy of the technical data.

Hard facts: Titanium, 12 HP plus,
22 Nm plus, 19 kg lighter
