VOLKSWAGEN Golf GTI

Akrapovič Slip-On exhaust system for the Golf VI GTI

The Volkswagen Golf GTI is considered an icon in the world of automobiles. The GTI is also popular with tuners, who search for GTI accessories to improve its power and look. The Akrapovič aftermarket Slip-On exhaust system with optional 100-millimeter tail pipes from precious titanium or attractive carbon fibers proves to be the ideal choice that makes the 6th generation GTI even more beautiful and powerful as well as lighter. In this process, sound plays at least as an important a role as appearance and improvement of performance. The stock GTI's sound is already music to ones ears. However, the Akrapovič homologated Slip-On exhaust system makes its 2-liter 4-cylinder engine play a true sporty symphony, which offers the customer an option of acquiring a full racing upgrade with the use of a link pipe. The Slip-On magically creates a unique and recognizable deep Akrapovič sound, which you simply must listen to. The engineers also complied with the wishes of customers that want to equip their GTI only with unique 100-millimeter tail pipes from titanium or carbon fiber, because the set can be ordered separately.

The numbers speak for themselves. The Slip-On exhaust system made of high quality stainless steel, developed especially for the GTI, offers an additional power of 4 HP and torque of 6 Nm. Additions or more precisely losses can also be seen on the scale, because the homologated Slip-On exhaust system is 3 kilograms lighter than the stock exhaust. If you buy a system with a link pipe, the weight difference comes to 7 kilograms. The Slip-On improves responsiveness of the GTI's 4-cylinder engine and particularly improves the power between 1.800 rpm and 3.300 rpm - in the most often used range. It is difficult to refrain from pushing the GTI's 4-cylinder engine towards the red section on the rpm indicator, because not only does the exciting sporty sound (even race sound when using the link pipe) cause an adrenalin rush, so does the increase of power, which is particularly noticeable from 4.500 rpm on.

Slip-On system, homologated:

- Stainless steel end mufflers

Hard facts:

- Plus 4 HP (at 5.440 rpm)
- Plus 6 Nm (at 2.830 rpm)
- 7 kg* lighter than stock

Optional:

- Link pipe
- Titanium tail pipes
- Carbon fiber tail pipes

*with optional link pipe
